

Construction Communicator

Construction Management Software Integrates Schedule

Fremont, California, November 25, 2008 – Architects, contractors, construction managers and developers can now view the complete schedule, as well as critical path activities and summary tasks, from within the Construction Communicator™ (www.constructioncommunicator.com) online construction management software. This sharing, and the ability to apply filters, allows the AEC team to simultaneously view the schedule, analyze the progress of the building project, and more easily identify the impact of recent changes.

Construction Communicator is designed for building owners, architects, contractors and engineers who handle between 100 and 2,000 or more contract administration records on a typical project.

This Web-based construction management software helps the AEC team collaborate more effectively by helping them manage Requests for Information (RFIs), Architect's Supplemental Instructions (ASIs), shop drawing submittals, change order requests (CORs), Contractor Payment Applications (G702/G703) and other communications that affect the day-to-day progress of the job.

Integrated Schedule

The optional ScheduleCom™ feature allows users to view the complete schedule as well as critical path activities and summary tasks, and apply other scheduling filters such as late or over-budget tasks, incomplete tasks and activities in a given date range. “This means the schedule can be shared with other team members as easily as sharing RFIs, ASIs, submittals, and the like. This can be especially valuable in conference calls,” said Richard Sampson, president of Richard Sampson Associates, developers of Construction Communicator.

Pricing

ScheduleCom is an optional add-on for Construction Communicator, which is available for 30 days without charge. Pricing for the subscription online construction management software is based on the number of users and the number of features such as RFIs, ASIs, submittals, or change order requests. Charges cover licensing, technical support, maintenance, upgrades and Internet hosting.

Company Information

Richard Sampson Associates, Inc., is a construction project management and consulting firm has more than 25 years experience in the planning, design, funding and construction of building projects.
